

Capital is attention made durable. Every line is a quiet sentence.

EQUITY

58%

US and international listed equities.

BONDS

24%

Investment grade and high yield combined.

CASH

12%

Short-term reserve and money market.

ALTERNATIVES

6%

Real assets, commodities, liquid alts.

Prepared for 배상현 · Annual allocation record, observation only. Past performance does not guarantee future results.

PART I · ALLOCATION ACROSS THE YEAR

HOW THE FOUR LINES MOVED TOGETHER

A twelve-month stacked reading of the four asset classes, ordered equity-on-top so drift in the risk-bearing layer sits at eye level.

FIG. 1 · ASSET MIX · TRAILING TWELVE MONTHS

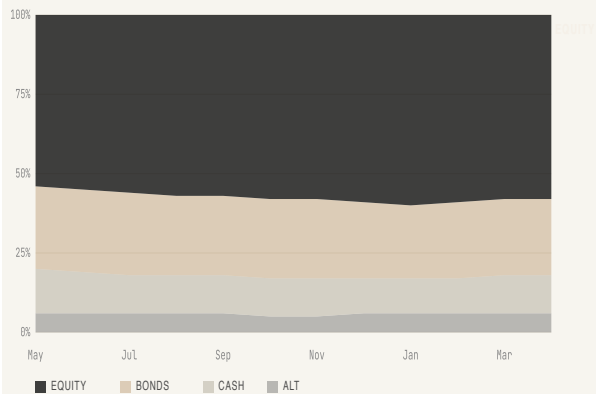

Fig. 1. Stacked reading of the allocation mix across twelve months. Equity on top, alternatives on the base. Ink tones darken toward the risk-bearing layer; bronze indicates the investment-grade bond band.

The equity line drifted four points through the year. Bond weight moved in the opposite direction.

REBALANCES

2

Executed rebalance events across the twelve-month window. No scheduled cadence is imposed.

LARGEST DRIFT

3.4pp

Single largest percentage-point drift observed between any two monthly marks, net of contributions.

TARGET BAND

±5.0pp

Tolerance window around the policy weight. Drift inside the band is noted but not actioned.

TRACKING

1.12%

Annualised standard deviation of the portfolio return minus the 60/40 benchmark return, observed.

PART II · ALLOCATION LADDER

THE EIGHT LINES THAT FORM THE PARAGRAPH

Eight sleeves ordered by policy target. Each row shows the target weight, the observed current weight, drift from policy, and the twelve-month trajectory as a sparkline.

SLEEVE	TARGET	CURRENT	DRIFT	3M Δ	12M Δ	NOTE	TRAJECTORY
US Equity	35.0%	38.0%	+3.0pp	+1.2	+4.8	Large-cap index + factor tilt.	
International Eq.	18.0%	16.5%	-1.5pp	-0.6	-1.8	Developed-market index.	
Emerging Eq.	5.0%	3.5%	-1.5pp	-0.4	-1.4	Broad EM index.	
US IG Bonds	15.0%	14.2%	-0.8pp	-0.2	-1.1	Aggregate index, intermediate.	
US HY Bonds	5.0%	5.8%	+0.8pp	+0.3	+1.0	HY index, ex-energy.	
TIPS	4.0%	4.1%	+0.1pp	+0.0	+0.2	Short-duration TIPS.	
Cash	10.0%	12.0%	+2.0pp	+0.4	+1.2	Money market + short T-bills.	
Real Assets	6.0%	5.9%	-0.1pp	+0.0	-0.3	REIT index + gold sleeve.	

Drift is the simple difference between current and target weight. Values inside the tolerance band are noted but not actioned on the ladder.

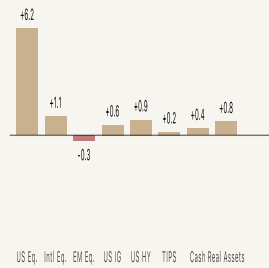

PART III · ALLOCATION QUAD

FOUR READINGS ON WHERE THE YEAR CAME FROM

Return contribution, drift history, the rebalance timeline, and a comparison to the 60/40 benchmark — four quiet ways of reading the same twelve months.

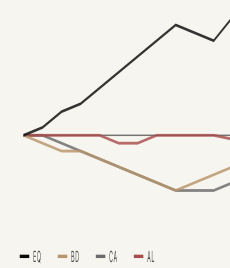

Q1 · CONTRIBUTION TO RETURN

Year-to-date, percentage points.

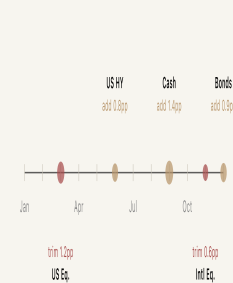

Q2 · 12-MONTH DRIFT LINES

Weight change from policy, pp.

Q3 · REBALANCE TIMELINE

Actions across the year, with sleeve.

Q4 · VS 60/40 BENCHMARK

Cumulative, percentage points.

ALLOCATION NOTES

01 Weights are month-end marks; intra-day variations are smoothed.

02 The 60/40 benchmark uses SPY/AGG, total return.

03 Real assets combine REIT index and a 2% gold sleeve.

04 Alternatives held for diversification, not for return alone.

05 Rebalance events are observed, not prescribed by the document.

Fig. 2. Four lenses on the year's allocation paragraph. Bronze marks positive direction; oxblood marks drag or trim events. All readings are observations of book data against policy weights.

PART IV · EDITORIAL

WHAT AN ALLOCATION IS NOT

A single sentence the desk is holding in mind for the year, and the short list of what the allocation line cannot settle for its reader.

*An allocation is not a verdict on the future
— it is the shelter you choose before the
weather changes.*

— PIVOXQUANT ALLOCATION DESK —

WHAT THIS ALLOCATION CANNOT SETTLE

1. The correct personal saving rate for the year.

2. Tax-lot placement across taxable and tax-deferred accounts.

3. The household's true liquidity need twelve months ahead.
4. Currency hedging outside the stated policy.

5. Real-estate equity held outside the brokerage account.
