PART I · RATING DISTRIBUTION

# WHERE THE BOOK SITS ON THE LADDER

A ten-bucket read across the long-term rating scale, with the portfolio's weighted share observed against each rung of the agency ladder.

FIG. 1 · RATING DISTRIBUTION · PORTFOLIO WEIGHT

Fig. 1. Ten-bucket distribution by portfolio weight. Bronze rungs are investment grade (BBB- and above); oxblood rungs are high yield. Dashed rule marks the agency-defined IG/HY boundary.

The book clusters tightly around the A and BBB rungs, a reading that accounts for 64% of the weighted exposure and keeps the average composite rating at A-. The weight held above the IG/HY line sits at 78%, a figure that has drifted two points lower over the trailing ninety days as the high-yield cohort absorbed more capital through the rebalance cycle.

Below the dashed divider, the BB rung carries 12% — a benign-looking figure once paired with the sector notes on page three. The deeper-stress buckets (CCC and below) remain at 4.0% combined, a reading held by two credits and not added to since the previous audit window.

# WHAT A RATING CANNOT SAY

A sentence the desk is holding for the week, paired with the short list of questions the rating letter is not equipped to settle.

*A credit rating is a letter the market writes about itself — read with interest, never as instruction.*

— PIVOXQUANT CREDIT DESK —

## WHAT THIS RATING CANNOT SETTLE

1. Issuer-specific liquidity events that post inside the quarter.

2. Covenant-level nuance beneath the headline letter grade.

3. Idiosyncratic litigation or regulatory risk.
4. Cross-default language in parent-subsidiary structures.

5. The personal tax or currency lens of the holder.
