Mean loss beyond VaR.

MAX DRAWDOWN · 90D

-8.70%

Peak to trough, daily marks.

CORRELATION RISK INDEX

0.58

90D rolling mean pairwise.

Past performance does not guarantee future results. This document is informational and does not constitute investment advice.

PART I · CORRELATION OBSERVED

WHERE THE TRIBE MOVES TOGETHER

A ninety-day Pearson reading on ten holdings. The diagonal is left quiet; the off-diagonal numbers are facts, not directives.

FIG. 1 · PAIRWISE 90-DAY CORRELATION · TEN NAMES

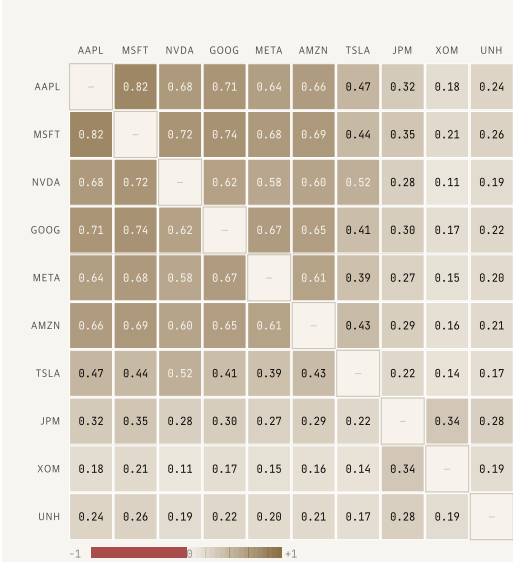

Fig. 1. Ninety-day rolling Pearson correlation on log returns. Bronze · positive co-movement. Faint red · negative. The diagonal is omitted so the eye reads pairs, not self-references.

Correlation, observed over ninety trading days, tells where the tribe moves together. When it tightens, portfolios become a single bet worn in ten costumes — the appearance of diversification, without its mathematics.

The highest observed pairing this month was AAPL-MSFT at 0.82. The lowest was XOM-NVDA at 0.11. Neither is a directive; both are facts. The bronze clustering in the upper-left quadrant reflects a structural feature of the held book, not an event.

Method ·
Pearson, 90D
rolling.

Sample · 252
trading days.

Next review ·
monthly close.

PART II · POSITION LADDER

THE NAMES INSIDE THE NUMBERS

Each row is a single observation of historical loss behaviour. The bronze highlight marks the two largest VaR contributions in the current book.

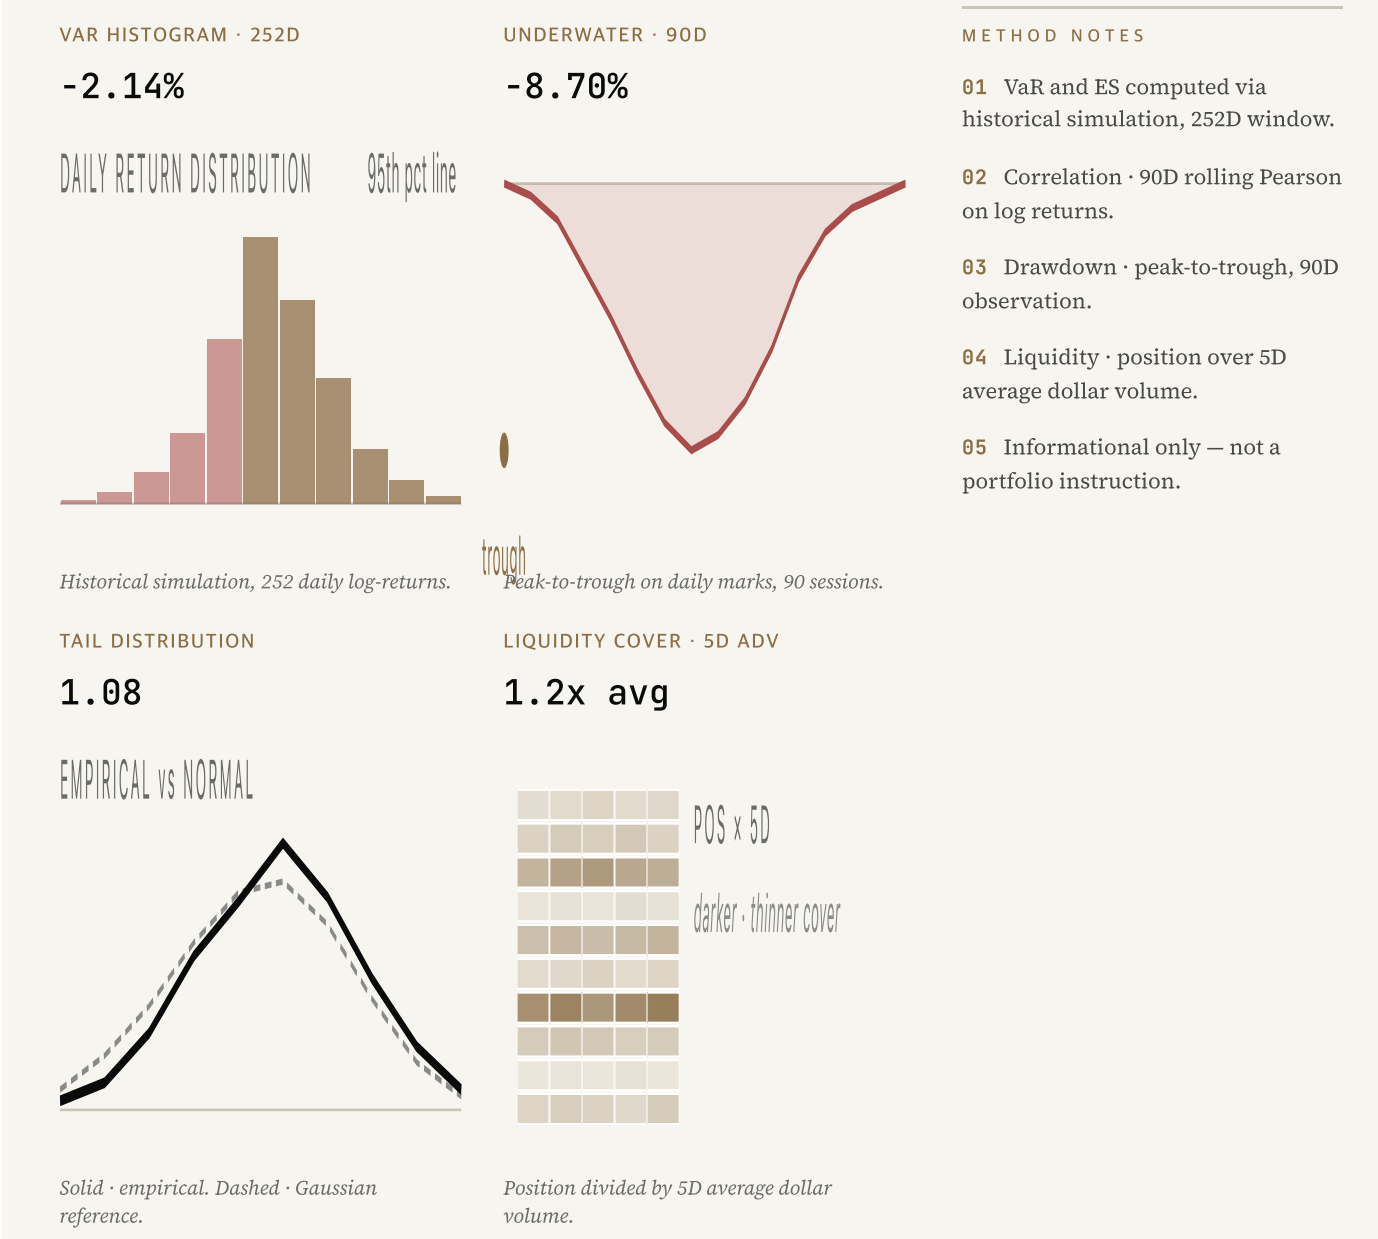

POSITION	WEIGHT	1D VAR · 95%	1D ES · 95%	90D MAXDD	BETA	VOL · ANN.	RISK · 90D TRAJECTORY
AAPL	12.8%	-1.84%	-2.71%	-6.42%	1.08	22.4%	
MSFT	11.2%	-1.72%	-2.58%	-5.88%	1.02	21.1%	
NVDA	14.4%	-3.41%	-5.12%	-14.20%	1.68	42.6%	
GOOG	9.6%	-1.92%	-2.84%	-7.11%	1.12	23.8%	
META	8.4%	-2.44%	-3.62%	-9.88%	1.28	28.9%	
AMZN	8.8%	-2.08%	-3.11%	-8.24%	1.18	25.4%	
TSLA	7.2%	-4.12%	-6.04%	-18.60%	1.84	48.2%	
JPM	6.4%	-1.28%	-1.94%	-4.12%	0.88	16.8%	
XOM	4.8%	-1.04%	-1.56%	-3.82%	0.74	18.2%	
UNH	5.4%	-1.18%	-1.78%	-4.48%	0.82	17.6%	
Portfolio	89.0%	-2.14%	-3.42%	-8.70%	—	—	Totals shown. Diversification is not additive.

Row-level VaR is a descriptive figure. Portfolio-level risk is not the arithmetic sum of position risks; diversification and covariance bend the line. The two bronze-highlighted rows denote the largest single contributions to the observed portfolio VaR.

PART III · TAIL & DRAWDOWN

READINGS AROUND THE TAILS

Four risk dimensions, each sampled over the same 252-day window. Methodology notes sit inline so the page reads as a single object.

WHAT THE DESK IS SITTING WITH

A sentence the risk desk is holding, and the short list of questions this board, by construction, does not answer.

Observations of risk do not subtract it. They shape the room we stand in while the weather turns.

— PIVOXQUANT RISK DESK —

WHAT THIS BOARD DOES NOT ANSWER

- | | |
|--|--|
| 01 Tax consequences of rebalancing. | 04 Correlated news shocks not priced in. |
| 02 Individual liquidity events. | 05 Personal cash-flow timing. |
| 03 Regime shifts not in the 252D window. | |
